

11-3: Attributes of Rational Graphs

Objectives:

1. I can find the x and y intercepts of a rational function
2. I can find the vertical and horizontal asymptotes of a rational function

X and Y Intercepts

Y intercepts, $x = 0$

$$f(x) = \frac{3x - 12}{x^2 - 5x - 6}$$

X intercepts, $y = 0$

$$\underline{f(x)} = \frac{3x - 12}{x^2 - 5x - 6}$$

$$x^2 - 5x - 6 \cdot 0 = \frac{3x - 12}{x^2 - 5x - 6} \cdot x^2 - 5x - 6$$

$$\underline{0 = 3x - 12}$$

$$x = 4$$

$$\text{num} = 0$$

Find the x and y intercepts of the following functions:

$$f(x) = \frac{(x-3)(x+1)}{x+2} = \frac{-3}{2}$$

$$0 = (x-3)(x+1)$$

$$x = 3, -1$$

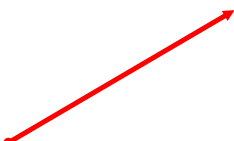

$$f(x) = \frac{3x-5}{(x-2)(x-3)}$$

Review of Vertical Asymptotes

$$f(x) = \frac{2}{x+3}$$

excluded
value

Set the denominator = 0, then solve for x

Find the vertical asymptotes:

a. $y = \frac{3x-5}{(x-2)(x+2)}$

b. $y = \frac{2x^3}{x-5}$

VA: 2, -2

c. $y = \frac{5x}{x+2}$

To find the *horizontal asymptote* (HA) -
compare the degrees of the numerator and
denominator if:

top heavy: oblique / *diagonal*
bottom heavy (HEB): $y = 0$
equal (HA): divide leading
coefficients

What kind of end behavior will the following have?

$$f(x) = \frac{-3}{x-1}$$

$$f(x) = \frac{3x-7}{x-2}$$

Identify the x and y intercepts, vertical and horizontal asymptotes, end behavior, and then graph.

$$f(x) = \frac{3x-2}{x-1}$$

y-int: 2
x-int: $\frac{2}{3}$
VA: 1
HA: 3

$$f(x) = \frac{(x-1)}{(x-4)(x+3)}$$

~~Domain~~
~~Range~~
